

Strategic Retail Layout Optimization & Rollout Recommendation

Driving Category Growth & Operational Efficiency
through Data-Backed Intervention

The trial layouts delivered measurable uplift, with Store 77 as the strongest case.

Key Insights

Sales driven by Older Families (Budget segment). Category anchored by Kettle brand, 175g packs.

Trial Outcomes

All trial stores outperformed historical baselines. Store 77 achieved definitive +29.1% sales surge, capturing massive latent traffic.

Final Recommendation

Proceed with phased chainwide rollout, using Store 77 as the primary spatial blueprint.

Does the new retail layout sustainably lift chip sales to warrant a chainwide rollout?

■ The Complication

High operational costs; risk of alienating existing shoppers.

■ The Objective

Isolate the true commercial impact of the layout.

■ The Deliverable

Data-driven recommendation on scaling the intervention.

Analytic Workflow: Establishing a Rigorous Baseline

Any divergence during the trial window represents the true, isolated impact of the new layout, free from external factors.

Category Value Anchored by Family Cohorts, Led by Budget-Conscious Older Families

Budget	Mainstream	Premium
 Older Families (Budget) \$168.4k (Core Value) 47.8	 Retirees (Mainstream) \$155.7k (Stable Spend) 42.5	Midage Singles/Couples (36.6)
Midage Singles/Couples (11.8)	Young Singles/Couples (Mainstream) \$157.6k (Volume Led) 60.5	New Families (20.8)
New Families (20.9)	Midage Singles/Couples (36.8)	Older Families (26.6)
Older Singles/Couples (33.6)	New Families (50.5)	Older Singles/Couples (21)
Retirees (20.3)	Older Families (46.8)	Retirees (23.7)
Young Families (25.3)	Older Singles/Couples (42.4)	
Young Singles/Couples (26.8)	Young Families (38.8)	Young Families (17.9)

Commercial Meaning: High-value family cohorts, particularly budget-conscious Older Families, are the primary revenue drivers. Strategy must prioritize family-value messaging and accessibility to maintain baseline

Kettle and 175g Dominate the Portfolio and Must be Protected

Recommendation: Standard family-size packs carry the ultimate commercial weight. Regardless of layout changes, these anchor products must retain premium, unobstructed visibility.

Trial Methodology: Ensuring a Like-for-Like Test

Trial Store	Control Store	Matching Reason
Store 77	Control 233	Matched on very close pre-trial sales and customer profile.
Store 86	Control 155	Matched on close sales trajectory and customer volume.
Store 88	Control 237	Matched on average sales/customer profile and excellent baseline alignment.

Control Selection Criteria

- 💰 Pre-trial sales performance
- 👤 Customer volume patterns
- 🛒 Basket frequency consistency

Commercial Meaning: These pairings ensure we are measuring the layout's actual performance, not preexisting demographic or geographic advantages.

Store 77: The Undisputed Winner with Largest Uplift

Sales Uplift
+29.1%

Customer Uplift
+23.5%

Commercial Meaning: Sales Rose Sharply Due to Increased Traffic, Not Artificially Inflated Basket Size. This Result Provides the Strongest Case for a Rollout.

Store 88: Achieving Balanced Growth by Lifting Both Traffic and Basket Intensity

Trial vs Control Monthly Sales: Store 88

Sales Uplift
+12.3%

Customer Uplift
+5.8%

Transactions per Customer
+7.5%

Commercial Meaning: Store 88 offers the most balanced performance. Even with modest traffic growth, the layout maximized the value of existing footfall by significantly driving higher buying intensity per customer.

Store 86: A Positive But Cautious Case

Caution: While directionally positive, Store 86 shows a more moderate commercial signal than 77 or 88. Basket intensity requires careful monitoring. This layout should be refined for stronger execution before widespread scaling.

Trial Performance Scorecard

The trial was a universal success across three distinct environments.

Store ID	Sales Uplift (%)	Customer Traffic Uplift (%)	Basket Intensity Uplift	Commercial Verdict
Store 77	+29.1%	+23.5%	Stable	Undisputed Winner
Store 88	+12.3%	+5.8%	+7.5%	Balanced Improver
Store 86	+9.8%	+13.5%	Stable	Moderate Success

OVERALL VERDICT: Phased Rollout is Recommended.

Strategic Synthesis: Why the Trial Layout Worked

The Commercial Mechanism

The new layout succeeded by removing friction for high-value customers (Older Families) seeking high-velocity products (Kettle/175g). It didn't create new demand, but rather **maximized existing behavioral gravity** to capture a larger share of pre-allocated budgets.

Final Commercial Recommendations

1. **Initiate Phased Rollout:** Scale the trial layout incrementally, using Store 77 as the primary architectural template to capture its demonstrated massive +29% sales uplift.

2. **Prioritize Merchandising Strategy:** Guarantee premium, unobstructed planogram visibility for Kettle brand and 175g pack sizes, as they serve as the non-negotiable financial anchors of the category.

3. **Refine Segment Targeting:** Safeguard value messaging for high-budget Older/Young Families, while simultaneously leveraging mainstream brand visibility to convert Young Singles/Couples into repeat purchasers.

4. **Implement Risk Mitigation:** Avoid a blind chainwide rollout. The moderate performance in Store 86 demonstrates that precise execution nuances are critical to replicating success and must be isolated before full-scale deployment.

30/60/90-Day Scaling Roadmap

Phase 1: Validation (Next 30 Days)

Owner: Commercial Strategy & Analytics

KPI: Baseline retention vs. control group
(target: <5% variance)

Action: Track trial control logic for one additional cycle to definitively confirm post-trial stability.

Phase 2: Standardization (30-60 Days)

Owner: Store Operations & Merchandising

KPI: Audit score across all pilot stores
(target: >95% compliance)

Action: Audit and standardize spatial and merchandising executions of Store 77 vs. Store 86 to isolate micro-factors for a unified playbook, ensuring merchandising consistency.

Phase 3: Supply Chain Alignment (60+ Days)

Owner: Supply Chain & Demand Planning

KPI: On-shelf availability for core SKUs
(target: >98%)

Action: Prepare supply chain forecasting for a projected 20%+ increase in Kettle/175g volume in Phase 1 rollout stores, ensuring supply alignment.
